Education

Indian Institute of Information Technology, Guwahati

B.Tech in Computer Science and Engineering

2022 – 2026

Guwahati, Assam

Gurukul Schools and Junior College, A.Lat

HSC (Maharashtra State Board) — 94.17%

2021

Kolhapur, Maharashtra

Experience

Troywings Technologies LLP

Software Engineer Intern

January 2026 – Present

Remote

- Developed full-stack user management systems using ASP.NET Core MVC and C#, optimizing responsive UI components and backend APIs for seamless profile registration and management.
- Engineered secure authentication workflows and real-time profile updates using AJAX and MongoDB, leveraging a reusable component architecture to streamline feature delivery.

CASET

Full Stack Developer Intern

July 2024 – August 2024

Remote

- Developed a financial data visualization dashboard for a B2B stock monitoring platform, building interactive React components enabling brands to track stock prices, weekly performance metrics, and profit trends.
- Built Badge Analytics and Payment pages with tiered transaction classification (Gold/Silver/Bronze), designing data-driven UI components that surface structured financial performance insights across brands.

Projects

AI-Tutor: Interactive Learning Platform | React, MongoDB, LangChain, FastAPI

GitHub 🔄

- Engineered a RAG pipeline using FAISS vector search and HuggingFace embeddings with recursive text chunking to extract contextually grounded answers from dense PDF datasets, enabling semantic retrieval that surfaces the most relevant document signals over direct keyword matching.
- Orchestrated end-to-end LLM workflows using LangChain across summarization, quiz generation, and flashcard creation modules, backed by a secure FastAPI service with JWT authentication and MongoDB persistence for managing user sessions and activity history.

UniLink: Unified Academic & Social Platform | React Native, Supabase

GitHub 🔄 | **Demo** 🔗

- Engineered a production-ready cross-platform academic platform using React Native and Supabase, architecting a deeply normalized relational PostgreSQL schema with Row Level Security and Role Based Access Control that enforces role-specific data permissions strictly at the database layer — independent of application logic.
- Designed a dual-method attendance system with a configurable penalty threshold engine and session-level duplicate prevention, guaranteeing data integrity across all submission states through unique constraints enforced directly at the schema level.

MoodTunes: Emotion-Based Music Recommender | React, MongoDB, DeepFace

GitHub 🔄 | **Demo** 🔗

- Engineered a real-time multi-room sync system using Socket.IO where owner-triggered song updates are instantly broadcast across all participants — maintaining consistent playback state across concurrent sessions.
- Integrated a DeepFace-powered Flask microservice for facial emotion recognition into a Node.js/MongoDB backend, delivering personalized mood-based music recommendations within a JWT-secured multi-user platform.

Technical Skills

Languages: C, C++, JavaScript, Python

Databases: MySQL, PostgreSQL, MongoDB

Frameworks: React, React Native, Node.js, Express.js, LangChain, Tailwind CSS, Expo

Tools: Git, GitHub, VS Code

Coursework: Data Structures & Algorithms, OOP, OS, DBMS, Networking, Cloud Computing, Machine Learning
